The 7th Scientific Meeting on Hypertension

Hypertension - Related Problems :
Management and Future Prospects

Dear Colleagues and Friends

It is a great pleasure, on behalf of the Indonesian Society of Hypertension, to welcome you all to this **7th Indonesian Hypertension Society Scientific Meeting**.

In the years to come the burden of hypertension is expected to rise enormously. There were approximately 972 million people living with high blood pressure in the world in the year 2000, compared to an estimated 1.56 billion in 2025, and in Indonesia approximately 31,7 % adult people living with hypertension.

Efforts to control the epidemic of high BP and its cardiovascular and renal complications have traditionally focused on pharmacologic treatment of persons with established hypertension. Such efforts reflect an impressive body of evidence that has documented the beneficial effects of antihypertensive drug therapy in preventing BP-related clinical complications.

We realized that drug therapy alone is an incomplete solution to the treatment of high BP and its complications. It is well recognized that the risk of BP-related cardiovascular and renal disease increases progressively throughout the range of BP, including ranges of BP previously considered normal. Hypertension is not always a physiological problem and it can also be caused due to various kinds of mental problems that disturb the mind

Furthermore, a large fraction of adults have a BP that is above optimal and yet is below the traditional threshold for drug treatment. Such BP levels nonetheless place individuals at increased risk of BP-related complications, yet they are not candidates for drug therapy. In view of these considerations, national and international policy-making bodies recommend lifestyle modification as a means to prevent and treat hypertension and thereby prevent cardiovascular and renal disease in the whole population.

To concentrate on the above mentioned difficulties, our theme this meeting is

“Hypertension - Related Problems : Management and the Future Prospects”

Thank you, and we look forward to seeing you in this hopefully fruitful event.
