

WELCOME MESSAGE

Dear Colleagues and Friends

On behalf of the Indonesian Society of Hypertension, we would like to welcome you to this 8th Indonesian Hypertension Society Scientific Meeting.

Hypertension is still a major public health problem with its prevalence increasing worldwide. It was estimated that 972 million people suffered from high blood pressure in the year 2000 and the number is expected to increase up to 1.56 billion in 2025. In Indonesia, approximately 31,7% adults are diagnosed with hypertension. The disease-burden of hypertension is foreseen and anticipation for this prominent matter is a must for physicians.

Nowadays, despite the excellent array of effective and well-tolerated medications, control of hypertension has not been adequate. Many hypertensive patients have uncontrolled BP and their number continues to increase. These challenges demand comprehensive management in both primary and referral care; from preventive public health efforts to promote more effective, rational and evidence-based treatments. Hence, the theme for this year's event is :

“Optimizing Hypertension Management in Primary and Referral Care for Morbidity and Mortality Reduction”

We hope this event will provide more knowledge and insights to achieve optimal hypertension management that can be applicable in our daily practice.

Once again, it is our great pleasure to welcome the participants and looking forward to meeting you soon.

Thank you.

Best regards,

Yuda Turana
